SAPTHAGIRI NPS UNIVERSITY

UNMATCHED EXCELLENCE, UNLIMITED POTENTIAL

SCHOOL OF APPLIED SCIENCE

MASTER OF COMPUTER APPLICATIONS

Lab Manual

On

Course Name: NoSQL Database

Course Code: 25MCAGL107

Submitted in partial fulfilment of the requirements for the award of the Degree of

Master of Computer Applications

BY

NITHIN KUMAR TC

25SUPMCAGL085

For the academic year 2025-26

Under the guidance of

Ms. AKSHATHA B

Assistant Professor

School of Applied Science, SNPSU

Signature of Student **Faculty**

TABLE OF CONTENTS

SL No.	List of Programs	Page No.
1	Creation of MongoDB Database (CRUD Operations)	02 - 04
2	Find, Sorting, Operators and Limit in MongoDB	05 - 10
3	Aggregation Operations in MongoDB	11 - 12
4	Delete Documents and Drop Collections in MongoDB	13 - 14
5	Basic Commands and String Operations in Redis	15
6	List Operations in Redis	16 - 17
7	Maintain Ordered Collection using Redis Sorted Sets	18 - 19
8	Case Study: Redis for Mobile Application Configuration	20 - 22
9	List and Perform Basic operations in Cassandra	23 - 26
10	CQL program to retrieve all records from users	27 -28
11	Case Study: Column-family databases for mobile application configuration	29 – 32
12	Write a program to create a graph with using Neo4j DB	33 – 34

13	Write a program to create a relationship using Neo4j DB	35 - 36
14	Write a program to traverse the graph Neo4j Database.	37 – 38
15	Write a program to display all nodes in the graph	39 - 40

MONGO DB

[Document Database]

To Run CQL Queries Inside Docker Exec:

Step 1: Open Docker → Container → Exec Tab

```bash
#
```

Step 2: Start CQL Shell manually Type:

Inside Exec tab, type:

```nginx
mongosh
```

Then Prompt Will Become like this:

```bash
test>
```

PROGRAM 1:

Create a database using MongoDB and perform CRUD operations

STEP 1: Create / Use Database

use CollegeDB

```
test> use CollegeDB
switched to db CollegeDB
```
