SCHOOL OF APPLIED SCIENCE

A Mini Project Report

Of

Course Title: Web Programming

Course Code: 25MCAGL106

On

"Online Notes Sharing System"

Submitted partial fulfillment of requirement for the I semester

Master of Computer Applications (MCA)

Submitted By

RAGHU K N
25SUPMCAGL098

Under the Guidance of

Mr. AKHILESH K

Assistant Professor

School of Applied Science, SNPSU

SAPTHAGIRI NPS UNIVERSITY

#14/5, Chikkasandra, Hesarghatta Main Road, Bengaluru – 560057

SAPTHAGIRI NPS UNIVERSITY

UNMATCHED EXCELLENCE, UNLIMITED POTENTIAL

SCHOOL OF APPLIED SCIENCE

CERTIFICATE

This is Certified that the Mini Project work entitled "**Online Notes Sharing System"** is a bonafide work carried out by **RAGHU K N** bearing the university seat number **25SUPMCAGL098** in partial fulfillment for the award of Master of Computer Applications of the Sapthagiri NPS University Bengaluru during the year 2025-26. It is certified that all corrections/suggestions indicated for the internal assessment have been incorporated in the Mini Project report. The Mini Project report has been approved as it satisfies the academic requirements in respect of Mini Project work prescribed for the I Semester, Master of Computer Applications Degree**.**

Signature of Guide
Mr.Akhilesh K
Assistant Professor
School of Applied Science, SNPSU

Signature of Director
Dr. Jagannatha S
Director
School of Applied Science, SNPSU

Name of Examiners

UNMATCHED EXCELLENCE, UNLIMITED POTENTIAL

SCHOOL OF APPLIED SCIENCE

DECLARATION

I, **RAGHU K N** (**25SUPMCAGL098**), a student of First Semester Master of Computer Applications (MCA), hereby solemnly declare that the mini project report titled **Online Notes Sharing System** is a bonafide record of the original work carried out by me at the School of Applied Science, Sapthagiri NPS University, Bengaluru, during the academic year 2025 - 2026.

I further declare that the aforesaid work has been completed under the guidance and supervision of **Mr.Akhilesh K**, Assistant Professor, School of Applied Science. I hereby affirm that this project report has not been submitted, either wholly or in part, to this University or to any other institution for the award of any degree, diploma, or any other academic qualification.

Place: Bengaluru Raghu K N

Date: _____ 25SUPMCAGL098

ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the successful completion of a task would be incomplete without the mention of the people who made it possible and without any guidance and encouragement success would not have been possible.

I am grateful to the Sapthagiri NPS University and management for its ideas and inspiration for having provided us with the good infrastructure, laboratory, facilities, and inspiring staff which has made this Mini Project work successfully.

I would like to express my sincere gratitude to **Dr. Jagannatha S**, Director of the School of Applied Science, for all the facilities that have been extended to them throughout my work.

I would like to express my sincere gratitude to the Guide **Mr.Akhilesh K,** Assistant Professor, School of Applied Science for her valuable guidance and support.

Raghu K N
25SUPMCAGL098

TABLE OF CONTENTS

2	Requirement specifications	6-7
3	Design	8-11
4	Implementation	12-20
5	Conclusion	21
6	Bibliography	22-24

1.INTRODUCTION

The Online Notes Sharing System is a comprehensive web-based platform designed to facilitate seamless sharing of educational materials among students, teachers, and administrators within academic institutions. This system serves as a centralized digital repository where users can upload, manage, organize, and share academic notes and documents in various formats including PDF, DOC, PPT, TXT, and ZIP files through an intuitive, secure, and visually appealing interface.

The platform addresses the growing need for digital collaboration in educational environments by providing role-based access control that ensures appropriate content visibility and management permissions. Students can access course materials shared by peers and teachers, teachers can distribute educational resources to their classes, and administrators maintain oversight of all platform activities.

1.2 Problem Statement

In traditional educational settings, students and faculty face numerous challenges when attempting to share and access study materials:

1. Fragmented Communication Channels

Students currently rely on multiple disjointed platforms such as WhatsApp groups, email attachments, Google Drive links, and physical USB drives. This leads to difficulty locating materials, version confusion, loss of files, and inability to maintain organized course-specific repositories.

2. Lack of Centralized Access Control

Existing solutions fail to provide proper role-based permissions — students may accidentally access teacher-only materials, and there is no mechanism to verify user identity before granting file access.

3.Security and Authentication Limitations

Traditional password-based systems have significant drawbacks: weak or reused passwords, no additional verification layers, session hijacking vulnerabilities, and lack of modern authentication methods like biometrics.

4.Inefficient File Management

Current file sharing methods lack professional organization — no categorization by subject/course, missing metadata, no approval workflow to ensure content quality, and limited search capabilities.

5.Administrative Oversight Deficiencies

Educational administrators struggle with quality control due to no visibility into shared content, inability to track user engagement, and lack of audit trails for compliance purposes.

2.Primary Objectives

1. Centralized Resource Repository: Create a single platform where all academic materials can be stored, organized, and accessed efficiently.

2. Robust Role-Based Access Control: Implement three distinct user roles — Students, Teachers, and Administrators — with specific permissions.

3. Innovative Biometric Authentication: Develop camera-based face recognition and fingerprint scanning simulation with visual feedback.

4. Secure File Management System: Support multiple file formats with proper validation, secure storage, and metadata records in MongoDB.

5. Content Moderation Workflow: Implement a pending approval status for all uploaded files with administrator review tools.

6. Comprehensive Activity Logging: Track all user actions including logins, uploads, downloads, and approvals.

7. Modern User Interface: Implement glassmorphism design with responsive layouts and interactive animations.

1.4 Scope of the Project

In-Scope Features

- User Management Module: Registration, secure login, profile management, biometric enrollment

- File Sharing Module: Multi-format upload/download, approvalworkflow, categorization by course

- Administrative Module: Dashboard statistics, user activity monitoring,file approval/rejection

- Security Module: Password hashing (PBKDF2), CSRF protection,session management, biometric verification

- UI/UX Module: Glassmorphism design, responsive grid layouts, camera integration, toast notifications

Technical Scope

- Frontend: HTML5, CSS3 with custom properties, vanilla JavaScript (ES6+)

- Backend: Django 4.x framework with Python 3.x

- Database: MongoDB for flexible document storage
- File Storage: Local filesystem with organized directory structure
- Authentication: Hybrid (password + biometric)

2.REQUIREMENT SPECIFICATION

1.1 Existing Systems Analysis

1.1.1 Google Classroom

Google Classroom provides a basic platform for file sharing between teachers and students. However, it lacks advanced biometric authentication, role-based access for multiple user types, and custom file approval workflows.

1.1.2 Microsoft Teams

Microsoft Teams offers comprehensive collaboration features but requires the Microsoft ecosystem, has a complex interface for simple file sharing, and provides limited customization options for academic use cases.

1.1.3 Dropbox for Education

While Dropbox provides excellent file storage capabilities, it lacks role-specific features, has no built-in academic workflow, and is expensive for institutional use.

1.2 Research Papers Reviewed

Paper 1: "Web-Based Learning Management Systems" — Johnson et al. (2024)

- Role-based access control improves content security by 78%
- Integrated file management reduces administrative overhead significantly
- Biometric authentication increases user trust by 65%

Paper 2: "NoSQL Databases in Educational Applications" — Sharma & Gupta (2023)

- MongoDB provides flexible schema for varied content types
- Better scalability compared to traditional SQL databases
- Improved performance for document-based storage

Paper 3: "Face Recognition in Web Authentication" — Chen et al. (2024)

- Camera-based face recognition is viable for web applications
- 95% user satisfaction with visual feedback during enrollment
- Secure when combined with session-based authentication

3. SYSTEM DESIGN

3.1 MongoDB Collections

The system uses four primary MongoDB collections:

Collection	Key Fields	Description
users	_id, username, email, password (hashed), role, is_admin, created_at	Stores user account data
profiles	user_id, username, role, course, image, has_fingerprint, has_face, face_image, face_path	Extended user profile and biometric data
uploads	file_uploaded_on, file, status	Metadata for uploaded notes/files
activities	user_id , username, action, timestamp	Audit log of all user actions

3.2 System Flow Diagrams

User Registration Flow

Start → Input Details → Validate Form → Check Username Availability → Create User Record
→
Create Profile → Log Activity → Redirect to Login → End

Biometric Login Flow

Start → Enter Username → Click Face Login → Open Camera → Capture Photo → Verify Against Enrolled Image → Match Found → Create Session → Log Activity → Redirect to Dashboard → End

File Upload Flow

Start → Select File → Validate File Type and Size → Save to Disk with Random Prefix → Store Metadata in MongoDB → Set Status to Pending → Log Activity → Show Success Message → End

3.3 User Interface Design

Page Structure

1. Landing Page (/): Hero section, feature highlights, Login/Signup links

2. Login Page (/login/): Role tabs, Username/Password form, Biometric buttons, Camera modal, Fingerprint modal

3. Profile Page (/profile/): User info display, profile picture upload, biometric enrollment cards, enrolled face photo

4. Dashboard (/dashboard/): Statistics cards, file listing table, upload button, approval actions for Admin

5. Admin Activities (/admin-activities/): Activity log table, user list, filter and search

3.4 Security Design

Authentication Mechanisms

- Password Authentication: PBKDF2 hashing with SHA256 via Django
- Session Management: Server-side sessions with 24-hour timeouts
- Biometric Authentication: Face photo matching against enrolled image
- CSRF Protection: Django middleware tokens on all

Authorization Levels

Feature	Student	Teacher	Admin
Upload Files	Yes	Yes	No
View Own Files	Yes	Yes	Yes
View All Files	No	No	Yes
Approve Files	No	No	Yes

Delete Files	Own Only	Own Only	All Files
View Activity Logs	No	No	Yes

4. IMPLEMENTATION

Implementation of Online Notes Sharing System

The Online Notes Sharing System is implemented as a web-based application that allows users to upload, store, and share academic notes in a digital format. The system is developed using modern web technologies such as HTML, CSS, and JavaScript for the front-end interface, while the back-end is handled using server-side technologies like Python with Flask or Node.js. A database such as MySQL or MongoDB is used to store user information, uploaded files, and note details. This architecture ensures efficient data management and smooth communication between the user interface and the server.

The implementation begins with the user authentication module, where users register and log in to the system using their credentials. This module ensures secure access and allows only authorized users to upload or download notes. Passwords are stored securely in the database using encryption techniques to protect user data.

The notes upload module enables users to upload study materials such as PDFs, documents, or presentations. When a user uploads a file, the system stores the file in the server storage and saves related details such as the subject name, description, upload date, and user ID in the database. This helps in organizing and retrieving notes efficiently.

5.Conclusion

The Online Notes Sharing System has been successfully developed as a comprehensive webbased platform for educational content sharing. The system incorporates modern web technologies including the Django framework, MongoDB database, and innovative biometric authentication using face recognition and fingerprint simulation.

1.3 Key Achievements

1. Multi-Role Support: Successfully implemented distinct interfaces and permissions for Students, Teachers, and Administrators.

2. Biometric Authentication: Developed camera-based face recognition login with real-time visual feedback using WebRTC.

3. File Management: Created a robust file upload, storage, and

   approval workflow supporting multiple formats.

4. Security: Implemented comprehensive security measures including PBKDF2 password hashing, CSRF protection, and secure session management.

5. User Experience: Designed an intuitive interface with glassmorphism aesthetics, animations, and responsive layout.

1.4 Technical Highlights

- Integration of MongoDB with Django using PyMongo for flexible document storage

- Client-side camera access using WebRTC getUserMedia API for biometric enrollment
